

BlackMark+™ Redaction Solutions

Flexible redaction for sensitive information

Businesses are facing security concerns due to legislation and have been directed to redact sensitive information. As an efficient and secure solution, PaperFree's BlackMark is ideal.

BlackMark is a highly effective and cost-efficient redaction solution designed to provide dependable results for all businesses. As one of the most trusted redaction solutions available, BlackMark is feature-packed and offers an easy-to-use interface to ensure your company's sensitive information is protected – accurately and permanently.

PaperFree's BlackMark+ offers easy configuration to redact sensitive fields from anywhere on documents. With the addition of OpenText's Advanced Recognition product suite, BlackMark+ will search entire documents and locate key information and then automatically redacts sensitive fields with the highest level of accuracy. From single page documents to documents numbering hundreds of pages, BlackMark+'s automated approach significantly reduces or eliminates the time needed for manual redaction review and correction.

Ideal for a variety of industries, such as healthcare, financial services, court systems and many others, BlackMark is adaptable to scalable to meet the needs of your business and safely and securely protect sensitive information.

- **Add customized text annotations**
- **Retains both original and redacted/annotated images**
- **Maintains redaction coordinates for downstream processing**

The Market Leader in Redaction

BlackMark+ offers two types of redaction:

Redaction for Structured Forms

- Structured Forms Redaction is the simplest redaction method but provides little flexibility in the ability to vary redactions between documents. It is used when all incoming documents are structured in a consistent, repeatable way. Structured redaction can be performed manually or automatically through the use of OCR/ICR technology that can search the document for defined fields that occur in the same area on the same document type in every instance.

Redaction for Unstructured Form Types (Free Form Redaction)

- Free Form Redaction is the most complex redaction method and is often quite difficult to automate. It is used when incoming documents have no structure, consistency, or repetition in their layout. Thanks to new technology developed by both PaperFree and OpenText, BlackMark+ has the ability to provide an automated method for redacting these types of documents in an efficient and cost effective way.

Flexibility

BlackMark+ is designed around a full-featured data capture platform and offers flexibility and customization options such as:

- The ability to provide special workflow and/or review queues
- The flexibility to review and manually redact when operator confirmation is an absolute requirement
- Create and post redacted versions to your publicly accessible repository while simultaneously preserving and storing the official record in a separate and secure archive

Cost Effective

BlackMark+ is not only more technologically advanced than any other redaction solution, it is also much more cost effective. PaperFree provides solutions with a simple and effective one-time licensing structure with no click charges. You can automatically extract and export key information from your documents and reduce the trouble and expense of manual data entry and indexing all for about the same price as most 'redaction-only' solutions are sold for today!

Product Highlights

- 'Free Form' or 'Dynamic' redaction of documents
- Redact data from anywhere on any type of document
- Two systems for the price of one
- Full featured automated redaction solution
- Full featured data capture solution (for use anywhere in your enterprise)
- Use out-of-the-box or add robust workflow capabilities
- Built on OpenText's award winning Captiva Capture architecture
